

THE PHANTOM ALARM

0002

THE ALTERNATIVE KNOGO PUBLICATION

 PRICE Technicians - Free
 Salesmen - £4.75p

C E N S O R E D !

 FOUR DAYS IN BLACKPOOL AND
 PETE SEES THE LIGHT!

Yes! Last months copy of the PHANTOM fell victim to the Tipp-Ex brush and glue pot of the Knogo board of censors. However that makes the 2 remaining proof copies of great value, one of which may even be auctioned off in support of funding production of the PHANTOM, as the salesmen were not forthcoming with their £3.75 (sorry about this months price rise).

Everyone out there reading this publication pay attention ! Consider yourselves severely told off. Submissions have been poor to say the least, if it was'nt for a few regular contributors and efforts made by one or two we would be very thin on the ground.

As you can see we have gone all state of the art. Produced by computer, no less. Thanks to the volunteered services of an avid reader. This should be a vast improvement on one finger typing and a bucket of Tip-Ex. However the desk top publishing software gave up the ghost after printing the title and we were forced to use a modified wordprocessing prog. for the rest of the issue. However we are sure that once the Managing Director sees this quality publication he will rush forward a healthy cash injection into the project (financial supporters might hope that this may guarantee them freedom from being a victim of the PHANTOM, but this is unlikely).

As it is now late on in the month and the PHANTOM is still not out on the streets, we the Editors (Ed's) apologise for the delay and have rewarded you with a bumper summer issue. WOW! By the way all this delay is due to the management giving the spanners too much work this month! You would think there was something more important to do than produce spoof magazines!

GET THOSE SUBMISSIONS IN!!!!

Ed.

After what was claimed to be an extensive hunt, for the age old problem of interference and with the avid assistance of Jon (bear in mind the beach was probably full of diversions Ed.) Pete finally tracked down the source of the problem. Right over his bonce! The small 24v spots extensively used in Principles are a MAJOR source of broad-band R.F. Walking up and down the street with a great big antenna and a communications receiver, looking a right pair of wallies they finally returned to the store to watch the needle go off the dial.

It appears that these units have a switch-mode PSU in them that generate hash from LW to over 10 Mhz causing us a big headache. Dave is currently analysing one of these lamps at the Brentford Lab.

Watch this space for further developments.

AN "F"ING GREAT FEATURE

As the company car feature was so popular, (although slashed by the censor! Ed.) turn to page 3 for company car II.

TALES FROM THE RIVERBANK

The annual company bash for entertaining our customers (?). Covered by our specially commissioned reporter. See page 2.

CLOUDS ON THE HORIZON

This popular submission from that famous brewer looks like it might run and run and run... See page 3.

STOP PRESS

TEXAN TURKEYS TEAR-UP !

See inside for details.
